

Application Location Instructions

Spray in the direction of arrows

Spray in the direction of arrows

Doors, Rocker Panels, Tailgates, Posts or Pillars

CAUTION: Apply with approved applicator air sprayer. Apply in all weep hole areas of doors (roll windows up when applying to doors), hood and trunk, and where there are pressed seamed body panels.

Professionally Applied and Available only at Authorized Dealers.

Gun Applicator Cleaning Instructions

When you have finished with the application of Rustproofing (as to not let any product dry on or in the gun) empty the remaining product back into original container. Screw the gun back onto the pot, turn the gun upside down and spray out any product residue until the spray wand has cleared.

For medium to heavy usage, I would recommend soaking the gun in solvent once a month to break free any hardened product in or outside of the gun.

Make sure to keep the threads on your gun clean to prevent stickiness. You may occasionally grease or WD40 the threads.
